Art Unit: 1652

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 16, 17, 19, 20, and 24-26 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the genes *citC*, *citD*, *citE*, *citF* and *citG* from *Klebsiella pneumoniae* in that order transformed into *E. coli* and the *citX* gene from *E. coli*, does not reasonably provide enablement for the instant claims. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims. This rejection is repeated for the reasons given in the last action. Applicants arguments have been carefully considered but do not overcome the instant rejection.

Applicants have amended the claim 1 to state that "the plasmid comprises an inducible promoter and a gene cluster comprising the genes *citC*, *citD*, *citE*, *citF*, *citX* and *citG* and wherein at least four of the genes *citC*, *citD*, *citE*, *citF* and *citG* are derived from *Klebsiella pneumoniae*". There is no order given for these genes and therefore they could be in any order whatsoever. As stated previously, the genes *citC*, *citD*, *citE*, *citF* and *citG* are presumably in that order and applicant have not challenged this statement with argument are evidence to the contrary. The claim also states that "at least four of the genes *citC*, *citD*, *citE*, *citF* and *citG* are derived from *Klebsiella pneumoniae*". As stated previously, nowhere in the specification is this stated to be the case and that all four genes do not have to be present. The examiner will allow claims drawn to *citC*, *citD*, *citE*, *citF* and *citG* from

Art Unit: 1652

Klebsiella pneumoniae in that order transformed into *E. coli* and the *citX* gene from *E. coli*, absent a very convincing argument to the contrary.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
